

Cardax Pharmaceuticals

The Criticality of Operational Efficiency

Cardax Pharmaceuticals is a drug discovery and development company targeting large unmet medical needs where inflammation plays a crucial and often newly defined pivotal role. While most anti-inflammatory treatments have significant long-term side effects that limit their utility, Cardax Pharmaceuticals has developed a novel approach to treating inflammation that is inherently safer, yet highly effective. The Company's first product targets cardiovascular disease, the largest sector of the pharmaceutical industry.

Cardax Pharmaceuticals understands that breakthrough technologies and streamlined operations at all levels, including the complex requisition process, are critical to success.

Prior to utilizing eRequisition®, Cardax Pharmaceuticals was using a custom Microsoft Access-based application to create and manage the Company's requisitions. While the application offered basic requisition tools, it lacked electronic routing, which hindered the approval process by requiring requisitions to be printed and carried from desk to desk for signature and/or scanned and e-mailed to supervisors located offsite. The system also lacked integration with Cardax Pharmaceuticals' existing accounting software, requiring data to be manually transferred between systems.

Recognizing the limitations of the application in place, Cardax Pharmaceuticals set out to find a fully electronic, turn-key solution, able to create and manage requisitions and integrate seamlessly with existing accounting systems, and found eRequisition®.

e-Requisition® is a powerful web-based application service designed to enable leading companies to streamline their requisition process and save time, effort, and money. With an easy-to-use interface, eRequisition® enables multiple users in an organization to initiate, review, and approve requisitions, as well as create purchase orders in their organizations' ERP application. Plus, its highly-sophisticated, rule-driven engine enables administrators to apply specific business rules to their organization.

"We made the strategic decision to use e-Requisition® because it offers advanced features such as electronic approval routing, automatic e-mail notifications, and synchronization with QuickBooks® which enable our team to operate more efficiently."
– David M. Watumull, Program Manager, Cardax Pharmaceuticals

With eRequisition®, Cardax Pharmaceuticals now utilizes a user-friendly, web-based application with electronic approval routing, automatic e-mail notifications, and synchronization with Quickbooks® accounting software.

"Going paperless has enabled our team to operate more efficiently, and most importantly, it has minimized the time from idea generation to practice by facilitating the process of getting the critical chemical and biological supplies into the hands of our scientists as quickly as possible." – Teresa Wong, VP Operations, Cardax Pharmaceuticals

SIDEBAR:

The Challenge: Cardax Pharmaceuticals required a user-friendly requisition application featuring electronic routing for quick approvals and seamless integration with the Company's existing accounting software.

The Solution: eRequisition® enables Cardax Pharmaceuticals to manage their requisition process and save time, effort, and money. eRequisition® features:

- Powerful web-based application
- Easy-to-use interface • Electronic routing
- Highly-sophisticated, rule-driven engine
- Seamless integration with numerous ERP platforms
- Minimal software installation
- No capital investment
